Datasheet

# Help Families Protect, Connect, Organize, and Stream Digital Media.

*Affordable and easy-to-use, Windows Home Server 2011 is the ideal solution to help families keep their important digital files and data automatically backed up, organized, and accessible.*

### ***Better Protect Music, Photos, Videos, and other Important Information***

Windows Home Server helps to make sure important media and data stays safe and protected by offering convenient automatic daily backups for every computer and easy-to-use disaster recovery features. With Windows Home Server, it is quick and easy to retrieve and restore important files in the event of a computer hard drive crash.

### ***Easily Connect to your Digital Files***

Windows Home Server provides a centralized and security-enhanced location for all your pictures, videos, music, and important documents to enable easy access and information sharing among family members. Using a personalized Web address provided by Windows Home Server, family members and friends can also access and stream music, videos and slides shows via the web.

### ***Easily Add Computers and Customize your Server***

Effortlessly increase the server capabilities as your needs grow. Easily add new computers to the network and add new users in one central location. Also expand features through third-party add-ins to enable home automation, anti-malware protection, photo sharing, and more.

## **Windows Home Server at a glance – simplicity to use and much more than NAS**

Our tiny home server is small enough to fit anywhere in your home and you don't need a keyboard, mouse or screen. Just plug it into your internet router and power on. It's really that simple.

If you have multiple PCs with increasingly large amounts of digital photography, music, video, and documents, then protecting, organizing, and connecting this digital media can be a challenging task. Help with managing your digital dilemmas has arrived. Windows Home Server does more than Network Attached Storage (NAS) - take a look.
